College of Arts and Sciences

Geography

Applied Geography (MA)

SLO01: Ability to Understand/Assess Geographic Research
Students will develop a thorough understanding of quantitative analysis and research methods, as they are commonly employed in Geography. Students will be able to evaluate the reliability and appropriateness of spatial data, statistical methods, and the various research designs used in geographic research.

SLO02: Knowledge of Research and Theories
Students will acquire a thorough grounding in the body of knowledge appropriate to their concentration or specialization in Geography. Students will demonstrate a firm grasp of the major issues in their field and be able to place their own work within the historical context of previous geographic research and theoretical approaches.

SLO03: Professional Communication of Research
Graduate students will effectively communicate the results of their field studies, laboratory work, data analysis, to their professional peers. This includes presentations at academic/professional conferences, the writing of professional reports, or the publication of papers in academic journals. This includes applying the highest standards of integrity in doing science and in the reporting of scientific results.

SLO04: Research and Professional Internship
Students at all levels will be develop skills and connections so that they are able to obtain knowledge-based professional internships, field experiences, and faculty/student research collaboration opportunities.
