School of Health and Human Sciences

Public Health Education

Community Health (DrPH) Community Health Education

SLO01: Applied Public Health Research Skills
Students are able to:

- Develop relevant research questions to address public health problems.
- Use appropriate methods/measures/designs to answer the research questions.
- Conduct research studies including data collection, management, analysis, and manuscript/report development.

SLO02: Conceptualization of Public Health Issues
Students are able to understand how public health problems are created across the social ecology, apply theories at each level, and distinguish between issues of causality and association.

SLO03: Interventions Across the Social Ecology
Students are able to use theories of behavioral, social and environmental change to create interventions to address public health problems.

SLO04: Professionalism
Students are able to...

- Apply current ethical standards to research and practice;
- Communicate and disseminate research findings through presentations, publications, and workshops;
- Demonstrate satisfactory teaching and mentoring skills through academic and classroom settings, and with community groups through presentations and workshops;
- Provide service to the field and community through consultations, membership on community boards, serving on review panels for project proposals and manuscripts, and other things as appropriate to their professional position.
